**INSTRUCTIONS FOR LIGHTING GRILL**

1. Always have the lid open on the grill
2. Make sure the main valve (red) and two brass wing valves under the grill are closed before turning on a propane bottle.
3. Turn on (open) one propane bottle.
4. Open small observation door below grill.
5. Open the main valve (red).
6. Push in each igniter button until both pilots light (visible through observation door).
7. Slightly open the two brass wing valves to light the grill burners.
8. Adjust flame of burners with brass wing valves.
9. Close small observation door.

**NOTE:** To shut down the burners and leave the pilots on for later grill use, close the two brass wing valves. To shut down the entire grill, close propane bottle(s), main valve (red), and two brass wing valves.
